

Description

[Register Now](#)

Presenting important findings in a clear and concise format can be challenging, especially when researchers have a large amount of important data. Research articles are not only assessed for the novelty of the research topic and the key outcomes but also on the structure of the manuscript, data presentation, and overall readability. Appropriately presenting data in the form of text, tables, and figures is critical for better readability. We are glad to announce that [The Royal Society of Medicine](#) in collaboration with [Karger Publishers](#) and [Enago](#) will conduct an interactive webinar to help researchers present their key research findings accurately and in a visually appealing way. In this session, we will focus on providing tips and detailed guidelines on how to present research data effectively, thus increasing the chances of publication in top-tier journals. Through this session, researchers will have an improved understanding of the following:

- Introduction to research data
- Importance of presenting research data effectively
- How to present text effectively
- How to create tables and figures
- How to acquire images
- How to avoid image manipulation
- Tips for writing legends and captions

Who Should Attend this Session?

- Master's Students
- Early-stage researchers
- Doctoral students
- Postdoctoral Researchers

About the Speaker

Gavin Hougham, Ph.D.

Highly published author, educator, and public speaker with over 150 professional papers and presentations

- Hougham is a highly published author and researcher with 20+ years of extensive experience in manifold scientific fields such as bioinformatics, health information technology, sociology, and cross-cultural Japanese gerontology.
- Currently appointed as a Senior Research Scientist at the Center for Home Care Policy & Research at the Visiting Nurse Service, New York, U.S.A, Dr. Hougham has led many senior-level projects at the strategic level in training and development of health outcomes researchers, program evaluators, clinicians, social workers, nurses, and other scientists.
- To date, Dr. Hougham has 150+ publications to his credit which include research papers, books, book chapters, review articles, and book reviews. He is also an expert editor and reviewer of

peer-reviewed journals, grants, and books.

- Further, Dr. Hougham has won 10+ grants and multiple awards for best scientific poster and oral presentations at conferences.
