

Description

New York, USA: Enago, a leading global editing and publication support organization, is pleased to announce that it is a Patron sponsor of **Directory of Open Access Journals (DOAJ)**, the creators of a community-curated library of open access journals that is aimed at helping authors access open access scholarly research more efficiently.

Enago has served as an instrumental force in propelling research integrity and has shown immense dedication to helping authors with knowledge about research and publishing. With this sponsorship, Enago will aim to bridge the gap between authors and qualified open access research, as part of the forward-thinking, community-focused vision embodied by **DOAJ**.

Speaking on the occasion, Sharad Mittal, CEO, Enago said, “We are delighted to be a Patron sponsor of DOAJ. Organizations like DOAJ promote values like excellence and integrity that mirror Enago’s vision since its inception, almost 12 years ago. Sponsoring **DOAJ** is a great way for Enago to increase our engagement with the research community, raise visibility of open access journals, and propagate ethical publication practices.”

With a mission to increase visibility and accessibility of peer-reviewed open access scholarly research, DOAJ has hosted a community-curated library of open access journals. Till date, DOAJ has indexed over 11,200 journals, allowing researchers to explore 3 million articles and counting.

Lars Bjørnshauge, Managing Director and Founder, **DOAJ** added, “It is a pleasure to welcome aboard Enago as a Patron sponsor of DOAJ. We appreciate this support from Enago, which enables us to further continue developing our services for the community.”

Earlier this year, Enago launched Open Access Journal Finder (OAJF) that uses **DOAJ**’s validated journal database to help researchers easily find quality, peer-reviewed open access journals. OAJF is a free tool that is powered by AI technology and displays vital journal details, letting researchers filter search results based on different parameters. With optimal security that ensures the manuscript information entered is not saved or retained by OAJF, the tool has been successfully launched in English, Japanese, Chinese, and Korean languages.
