

Description

Open Science is the rational choice to promote openness, integrity, collaboration, and reproducibility in scholarly research. Open Access (OA) supports transparency and free availability of research articles. But has the research community across disciplines and around the globe been entirely able to utilize its benefits? The Open Access Week celebrated its tenth year with the theme “Open for Whom? Equity in Open Knowledge.”

This podcast includes several publishing industry stalwarts discussing and sharing their perspectives and opinions about how Open Access has impacted the research environment globally as well as in their respective disciplines and geographies.

In case of any questions related to the podcast or your publication journey visit our Q&A Forum.
