

## Description

Academic conferences are an important part of graduate work. They offer researchers an opportunity to present their work and network with other researchers. So, how does a researcher get invited to present their work at an [academic conference](#)? The first step is to write and submit an [abstract of your research paper](#).

The purpose of a conference [abstract](#) is to summarize the main points of your paper that you will present in the academic conference. In it, you need to convince conference organizers that you have something important and valuable to add to the conference. Therefore, it needs to be focused and clear in explaining your topic and the main points of research that you will share with the audience.

## The Main Points of a Conference Abstract

There are some [general formulas for creating a conference abstract](#).

**Formula: topic + title + motivation + problem statement + approach + results + conclusions = conference abstract**

Here are the main points that you need to include.

### Title

The title needs to grab people's attention. Most importantly, it needs to state your topic clearly and develop interest. This will give organizers an idea of how your paper fits the focus of the conference.

### Problem Statement

You should state the specific problem that you are trying to solve.

### Purpose

---

The abstract needs to illustrate the purpose of your work. This is the point that will help the conference organizer determine whether or not to include your paper in a conference session.

## Methods

You have a problem before you: What approach did you take towards solving the problem? You can include how you organized this study and the research that you used.

# Important Things to Know When Developing Your Abstract

## Do Your Research on the Conference

You need to know the deadline for abstract submissions. And, you should submit your abstract as early as possible.

Do some [research on the conference](#) to see what the focus is and how your topic fits. This includes looking at the range of sessions that will be at the conference. This will help you see which specific session would be the best fit for your paper.

## Select Your Keywords Carefully

Keywords play a vital role in increasing the discoverability of your article. Use the keywords that most appropriately reflect the content of your article.

## Be Concise

Once you are clear on the topic of the conference, you can tailor your abstract to fit specific sessions.

An important part of keeping your focus is knowing the word limit for the abstract. Most word limits are around 250-300 words. So, be concise.

## Use Example Abstracts as a Guide

Looking at [examples of abstracts](#) is always a big help. Look at general examples of abstracts and examples of abstracts in your field. Take notes to understand the main points that make an abstract effective.

## Avoid Fillers and Jargon

As stated earlier, abstracts are supposed to be concise, yet informative. Avoid using words or phrases that do not add any specific value to your research. Keep the sentences short and crisp to convey just as much information as needed.

## Edit with a Fresh Mind

---

After you write your abstract, step away from it. Then, look it over with a fresh mind. This will help you edit it to improve its effectiveness. In addition, you can also take the help of professional [editing services](#) that offer quick deliveries.

## Remain Focused and Establish Your Ideas

The main point of an abstract is to catch the attention of the conference organizers. So, you need to be focused in developing the importance of your work. You want to establish the importance of your ideas in as little as 250-300 words.

Have you attended a conference as a student? What experiences do you have with conference abstracts? Please share your ideas in the comments. You can also visit our [Q&A forum](#) for frequently asked questions related to different aspects of research writing, presenting, and publishing answered by our team that comprises subject-matter experts, eminent researchers, and publication experts.
