

Description

Research has grown in multiple facets, and with it has risen the crisis of research reproducibility. There has been a proliferation in incidents where researchers have questioned the research methods and ethical practices followed to publish it. Amidst this insecurity and questionable research data, reliable, robust and safe ways of delivering research outputs stand significant in the scholarly communications world. Peer review process, the pillar of scholarly publishing, is at the forefront of upholding the safety of research and fostering research integrity.

Peer reviewers are continuously assisting the evolving research and ensure publication of reliable research studies for better dissemination of knowledge followed by a substantial spike in scientific advancements. Through this e-book we aim to shed some light on the lesser known aspects of this dynamic mechanism of scholarly communication—The Peer Review Process!
