

Description

Are you aiming to build a research career in Humanities? Are you aware of the methods that are used in Humanities research? Humanities is the study of human culture and it employs diverse methodologies to carry out research. Each of these methods is unique in its own right. Through this presentation, we will go through the four popular types of methodologies in Humanities i.e. historical research, textual criticism, conceptual analysis, and synoptic methods. A detailed discussion of these methods will help scholars from humanities background navigate their way through their research journey.

Through this presentation, you will have more information about the following:

- Types of methods in humanities
- Significance and standard protocols of historical research
- Critical analysis of historical research data
- Definition and principles of textual criticism
- Analyzing the credibility of information
- Types of conceptual analysis and model protocols for each
- Significance and use of synoptic methods
- Insights on Digital Humanities and its utilization
