

Description

Drafting and publishing manuscripts is an integral part of every researcher's career. Although it may seem easy to some, there are several researchers who struggle to [put together the perfect manuscript](#). Through this infographic, we aim to list down a set of tips that can help researchers put together their work in the form of a publishable manuscript.

TIPS TO DEVELOP YOUR ACADEMIC WRITING SKILLS

Conduct a Thorough Literature Review

Before you start writing, ensure you have sufficient knowledge of the subject. Spend a good amount of time on reading before you start writing.

Create an Outline

Spend time in creating an outline before you start writing the body of the article. An outline will give direction and clarity to your writing.

Keep Your Audience in Mind

Your aim is to communicate your work to others. Keep the level of understanding/sensibility of your audience in mind when you develop your content.

Pay Attention to Language & Grammar

Language and grammar play an important role in communicating your work effectively. Seek help from a professional editing service (Enago) if needed.

Avoid Plagiarism

Plagiarism is a serious offence. Avoid using others work without proper attribution. Use a plagiarism detection software to detect and avoid plagiarism.

Read What You Have Written

Spend time on reading what you have written. It will help you improvise your content and also identify mistakes and typographical errors in your work.
