

Description

So you have carefully written your [research paper](#) and probably ran it through your colleagues ten to fifteen times. While there are many elements to a good research article, one of the most important elements for your readers is the background of your study.

What is Background of the Study in Research

The background of your study will provide context to the information discussed throughout the [research paper](#). Background information may include both important and relevant studies. This is particularly important if a study either supports or refutes your thesis.

Why is Background of the Study Necessary in Research?

The background of the study discusses your problem statement, rationale, and research questions. It links [introduction to your research topic](#) and ensures a logical flow of ideas. Thus, it helps readers understand your reasons for conducting the study.

Providing Background Information

The reader should be able to understand your topic and its importance. The length and detail of your background also depend on the degree to which you need to demonstrate your understanding of the topic. Paying close attention to the following questions will help you in writing background information:

- Are there any theories, concepts, terms, and ideas that may be unfamiliar to the target audience and will require you to provide any additional explanation?
- Any historical data that need to be shared in order to provide context on why the current issue emerged?
- Are there any concepts that may have been borrowed from other disciplines that may be unfamiliar to the reader and need an explanation?

How to Write a Background of the Study

The structure of a background study in a research paper generally follows a logical sequence to provide context, justification, and an understanding of the research problem. It includes an introduction, general background, [literature review](#), [rationale](#), objectives, [scope and limitations](#), significance of the study and the [research hypothesis](#). Following the structure can provide a comprehensive and well-organized background for your research.

Here are the steps to effectively write a background of the study.

1. Identify Your Audience:

Determine the level of expertise of your target audience. Tailor the depth and complexity of your background information accordingly.

2. Understand the Research Problem:

Define the research problem or question your study aims to address. Identify the significance of the problem within the broader context of the field.

3. Review Existing Literature:

Conduct a thorough [literature review](#) to understand what is already known in the area. Summarize key findings, theories, and concepts relevant to your research.

4. Include Historical Data:

Integrate historical data if relevant to the research, as current issues often trace back to historical events.

5. Identify Controversies and Gaps:

Note any controversies or debates within the existing literature. [Identify gaps](#), limitations, or unanswered questions that your research can address.

6. Select Key Components:

Choose the most critical elements to include in the background based on their relevance to your research problem. Prioritize information that helps build a strong foundation for your study.

7. Craft a Logical Flow:

Organize the background information in a logical sequence. Start with general context, move to specific theories and concepts, and then focus on the specific problem.

8. Highlight the Novelty of Your Research:

Clearly explain the unique aspects or contributions of your study. Emphasize why your research is different from or builds upon existing work.

Here are some extra tips to increase the quality of your research background:

TIPS TO INCREASE THE QUALITY OF RESEARCH BACKGROUND

- **Ensure Clarity**
- **Revise and Refine Your Content**
- **Seek Feedback from Peers or Mentors**
- **Tailor the Length and Detail of the Research Background**
- **Avoid Ambiguity**
- **Organize the Sub-sections Logically**

Example of a Research Background

Here is an example of a research background to help you understand better.

The Impact of Social Media on Mental Health

In recent years, the influence of social media on individuals' lives has become a subject of growing concern, particularly in relation to mental health outcomes. The exponential rise in the use of social media platforms has created unprecedented opportunities for social connectivity and information sharing. However, alongside the benefits, a burgeoning body of evidence suggests that the excessive use of social media may be associated with adverse effects on mental well-being. Studies examining

the relationship between social media usage and mental health have yielded mixed findings, necessitating a comprehensive investigation into the nuanced dynamics at play. On one hand, social media platforms offer a space for individuals to cultivate relationships, express themselves, and access diverse content. On the other hand, concerns have been raised regarding the potential for social media to contribute to feelings of social isolation, body image dissatisfaction, and anxiety, especially among vulnerable populations such as adolescents and young adults. Recent research has also explored the role of specific features of social media, such as the prominence of curated self-presentations and the prevalence of cyberbullying, in shaping mental health outcomes. Given the ubiquity of social media and its potential impact on mental health, there is a pressing need for a nuanced understanding of the mechanisms through which social media usage may influence psychological well-being. This research aims to contribute to the existing literature by investigating the relationship between different dimensions of social media use and various aspects of mental health, with a focus on identifying both risk factors and potential protective factors. Through a multidimensional approach that incorporates quantitative surveys, qualitative interviews, and analysis of user-generated content, this study seeks to shed light on the complex interplay between social media and mental health. The findings are expected to inform the development of evidence-based interventions and recommendations for individuals, educators, and policymakers aiming to mitigate the potential negative effects of social media on mental well-being.

The above hypothetical example provides a research background, addresses the gap and highlights the potential outcome of the study; thereby aiding a better understanding of the proposed research.

What Makes the Introduction Different from the Background?

Your introduction is different from your background in a number of ways.

1. The introduction contains preliminary data about your topic that [the reader will most likely read](#), whereas the background clarifies the importance of the paper.
2. The background of your study discusses in depth about the topic, whereas the introduction only gives an overview.
3. The introduction should end with your research questions, aims, and objectives, whereas your background should not (except in some cases where your background is integrated into your introduction). For instance, the C.A.R.S. ([Creating a Research Space](#)) model, created by John Swales is based on his analysis of journal articles. This model attempts to explain and describe the organizational pattern of writing the introduction in social sciences.

Points to Note

Your background should begin with defining a topic and audience. It is important that you identify which topic you [need to review](#) and what your audience already knows about the topic. You should proceed by searching and researching the relevant literature. In this case, it is advisable to keep track of the search terms you used and the articles that you downloaded. It is helpful to use one of the research paper management systems such as Papers, Mendeley, Evernote, or Sente. Next, it is helpful to take notes while reading. Be careful when copying quotes verbatim and make sure to put them in quotation marks and cite the sources. In addition, you should keep your background focused but balanced enough so that it is relevant to a broader audience. Aside from these, your background should be critical, consistent, and logically structured.

Writing the background of your study should not be an overly daunting task. Many guides that can [help you organize your thoughts](#) as you write the background. The background of the study is the key to introduce your audience to your research topic and should be done with strong knowledge and thoughtful writing.
