Watch Now

Now that you have finished writing your [research paper](#), what's next? How do you get it published in the right journal in the shortest time? You'll be looking at hundreds of potential target journals and competing with tens of thousands of manuscripts in your research area. You need a strategy to maximize your chances of success!

To find the right journal, you need to be very clear about your publication expectations—publication deadline, journal index status, impact factor, and open access or subscription-based journals. You will also need a realistic assessment of the novelty and significance of your manuscript. To reduce the journal revision period, you should examine your paper from the point of view of peer reviewers and pre-empt the potential problems before submission. We will show you a smart way to achieve this.

You will learn:

- i. How to select the right journal for your research paper
- ii. How to eliminate instances of plagiarized content
- iii. How to pre-empt the criticisms that will be raised by journal peer reviewers

Expert Profiles

Dr. Sujata Basu

Manager-Quality Management and Training, Enago Publication Support

Sujata Basu is a published author with 12+ years of academic and research experience in diabetes and free radicals research. She has published articles and books in scientific platforms and journals of reputed publishers like Springer, Elsevier, Taylor & Francis.
