What is “Word Choice” in Writing?

‘Word Choice’ in writing is the usage of effective and precise language that conveys information not just in a functional way, but also to enlighten the reader. Effective word choice examples are the ones that use clichés sparingly, focuses on denotations and connotations, delivers straightforward meaning, avoids jargon, and is not characterized by a wide vocabulary.

Why is “Word Choice” Important in Writing?

As an author, choosing the right words while writing a manuscript is crucial for success. Academic writing, like most other forms of writing, is a series of choices. When it's time to write, you have to carefully choose words that can clearly express the idea and then decide how you will rearrange those words into phrases, sentences, and even paragraphs. A strong word choice makes it easier for readers to understand the concept. It clarifies, explains, and expands ideas.

While evaluating word choice, it is important to address the concerns that restrict the author from disseminating correct information to the readers.

Some of the most common problems concerning word choice usage include the following:

Misused Words

Sometimes in a haste or out of ignorance, authors tend to use incorrect words. This arises mostly in cases of [commonly confused English words](#).

Example 1: There were *averse* effects.

Revision 1: There were *adverse* effects.

Reason for change: “Averse” means to be disinclined towards something, whereas “adverse” means detrimental.

Example 2: The journal *excepted* your article for publication.

Revision 2: The journal *accepted* your article for publication.

Reason for change: “Except” means to exclude something, whereas “accept” is the consent to receive something.

Words with Unwanted Connotations or Meanings

Example 1: I sprayed the ants in their *personal* places.

Revision 1: I sprayed the ants in their *hiding* places.

Reason for change: The first sentence has a double meaning. The second sentence conveys the intended meaning and is completely clear.

Example 2: I want to do something *different* in my presentation.

Revision 2: I want to do something *unique* in my presentation.

Reason for change: “Different” mean something other than the regular activities, whereas “unique” implies something completely unusual and unrelated to the regularly presentation practices.

Using Complex Words Instead of Simpler Words

Example 1: “Conventional wisdom” is a relatively new *designation*.

Revision 1: “Conventional wisdom” is a relatively new *term*.

Reason for change: The first sentence uses a complex word, whereas in the second sentence, it is substituted by a simple word with a clear meaning.

Example 2: It was difficult to *comprehend*.

Revision 2: It was difficult to *understand*.

Reason for change: The word “comprehend” is substituted by “understand” without changing the meaning of the statement.

Awkward Word Choices

Example 1: *Child students’* consciousness for marine education still remains an open research problem for creating a suitable teaching plan.

Revision 1: Consciousness *among young students* for marine education still remains an open research problem for creating a suitable teaching plan.

Reason for change: The italicized phrase in the first sentence does not read well and lacks clarity to a certain extent, whereas the second is certainly clearer.

Example 2: *I came to the realization* that the answer is incorrect.

Revision 2: *I realized* that the answer is incorrect.

Reason for change: Sentence revised to avoid wordiness and provide direct information.

Incorrect Use of Words with Similar Meaning

Example: When discussing the definition of tuberculosis, we should address that physicians are required to *quickly* identify patients with risks of infection with pathogens.

Revision: When discussing the definition of tuberculosis, we should address that physicians are required to *promptly* identify patients with risks of infection with pathogens.

Reason for change: The word “quickly” means “rapidly, with speed,” whereas “promptly” means “both soon and quickly,” so the latter is the right word choice in this sentence.

Use of Jargon

Example: The dialectical interface between neo-Platonists and anti-disestablishment Catholics offers an algorithm for deontological thought.

Revision: The dialogue between neo-Platonists and certain Catholic thinkers is a model for deontological thought.

Reason for change: The words “dialectical interface”, “anti-disestablishment” make the sentence wordy and would not be understood by all the readers. The revised statement is a simplified statement to be easily understood by all without compromising its meaning.

Use of Clichés

Example: I am as loose as a goose today.

Revision: I am very relaxed today.

Reason for change: The cliché “loose as a goose” is replaced in the revised version to give direct information in a simpler manner.

Wordiness

Example: I came to the realization that this method won’t work out.

Revision: I realized that this method won’t work out.

Reason for change: The phrase “came to the realization” is replaced by “I realized” to reduce the word count and not hamper the meaning of the sentence.

Choosing Specific Words

Example: Previously, a substantial number of patients with HCAP were *defined* as having community-acquired pneumonia.

Revision: Previously, a substantial number of patients with HCAP were *diagnosed* as having community-acquired pneumonia.

Reason for change: The first sentence uses a word that conveys a meaning that is not as accurate as the word in the second sentence (also, from a content perspective, “diagnosed” is the accurate technical term here).

Moving on, word choice in academic writing also involves using words that are shorter and more concise than their lengthier counterparts, even though they mean the same. The table given below lists some such words.

Longer phrase	The concise word
I came to the realization that	I realize that
Concerning the matter of	About
During the course of	During
In the event that	If
In the process of	During, While
Regardless of the fact that	Although
Due to the fact that	Because
In all cases	Always
At that point in time	Then

Prior to

Before

Keeping in mind

Considering

Practice following exercises to improve word choice while writing a manuscript:

Be careful when editing words you maybe unfamiliar with. For example, "demure" or "erudite". Look up the meaning of the word and then use it.

Don't try to impress by using long words. For example, "a sufficient number of" can be rewritten as "enough"

Before you depend too much on strong adverbs and strong adjectives, make sure you are first using accurate and strong nouns and verbs. For example, instead of "The person danced" you can use "The ballerina twirled"

Ensure that the word choice changes do not lead to redundancy and repetition. For example, "Advance notice" can be simply rewritten as "notice" because the word "advance" is superfluous.

So, now you know that when you choose words to express your ideas, you not only have to think about what makes sense and sound the best to you but also what will make sense and sound the best to your audience. Thinking about the reader and their expectations will also help you make better decisions. As word choice is important, reviewing the evaluative modifiers is one way to revise for word choice.

Do follow these tips and choose the right words when writing your manuscript. Here's to flawless academic writing!
